

Pictured with Accu-Cut 202L

The Accu-Vision system combines the precision and ease of use of the Accu-Cut 202L tube cutter with a PC-based Machine vision inspection system. This system automates the entire sequence of the cut and inspection process, including fixturing and lighting each part.

Features:

- Cut, collect, fix, and measure all in one easy process
- Fully automated sequence of the cut and inspection process including fixturing and lighting of the part
- Programmable features include inspection frequency, inspection tolerance, and nominal values
- Cut and image inspection intervals range from every cut, to every 100th cut
- All inspection files are saved to a Microsoft Excel readable format
- Pass/Fail decision, along with all other information is presented on a color touchscreen
