

The **Accu-Feed CPF** is the newest technology in ASG Feeders. The CPF has fewer moving parts, which adds extra reliability, while still giving you the quality expected with any feeder bearing the Accu-Feed name. The two foot body design will take up half the floor space of its larger cousin the CWT410, but can still be fitted with a six foot tray to handle longer lengths of wiring making the CPF a more practical choice for those looking to maximize floor-space.

### Features:

- Feed and retract from a process (with or without an I/O)
- Feed to a work position, release for processing then remove to an output bin.
- Measure length, diameter or taper (including profiling) of product after processing.
- High Voltage Inspection insulation integrity
- Insulation Ablation Inspection
- Feed parts from one feeder to two processes
- Handle wires, tubes, catheters and rods from .01 to .35 inch diameters and lengths from 8 to 240 inches
