

Press Release

ASG Medical Systems, LLC is pleased to announce our NEW **Advanced Guidewire Feeder (AGF) with in-line cutter!**

ASG Medical Systems, LLC remains in the forefront of the Medical Device Industry technology with its introduction of our **Advanced Guidewire Feeder (AGF)** with in-line cutter!

The Advanced Guidewire Feeder (AGF) with in-line cutter introduces a “cut-to-length” capability for automated guidewire grinding and can make 10 or more guidewires from a single input wire. This AGF, paired with your centerless grinder, can now feed, grind, and cut your guidewires to precise lengths from 10-400 cm. These two process steps-in-one save labor, floor space, and cycle time, meaning a faster throughput and higher output, tighter customer specs and quality, less scrap, and fewer grinders needed! To speed set-up time and process changeovers, the AGF is computer controlled with a color touch screen, an automatic bar code recipe selection, measurement during processing, and super precise wire position feedback to your grinder.
