25 April 2009

## Press Release

ASG Medical Systems, LLC is pleased to announce our NEW Center Pick Feeder (CPF)!

ASG Medical Systems, LLC remains in the forefront of the Medical Device Industry technology with its introduction of our **new Center Pick Feeder (CPF)**!

**The Center Pick Feeder (CPF)** is the latest and greatest in feeding technology and the newest member of our leading-edge Accu-Feed family. The CPF uses an accurate and trouble free center pick process to pick and stage your materials for feeding and retracting, if desired, into any number of operations and then feeding to one or two separate processes. The CPF is capable of handling wires, tubes, catheters, and rods from .010-.350 OD and length from 8 to 240 inches. The beefed up insulation is designed to guarantee electronic integrity when used with a High Voltage Inspection device, such as a catheter fault detector. With the CPF, inefficient manual feeding and binning of materials is a thing of the past!
