FOR IMMEDIATE RELEASE**ASG Medical Systems Celebrating 20 Years of Change and Success**

ASG Medical Systems is celebrating 20 years of change and success. Founded in 1991 as Automation Services Group, ASG was acquired by Tyco Electronics eight years later. Recognizing the potential of the then-small medical division, Dan Woodward, current Director of Technology, and Paul Ogden, current Director of Sales, bought and grew this portion to develop ASG Medical Systems. Since then, the company has become the world leader in automated catheter and guidewire manufacturing by upholding unparalleled standards in flexible, integrated and accurate automation and unsurpassed customer support.

We would not be able to celebrate this milestone without the support of our customers who inspire us everyday to build machines of the highest caliber. We demand excellence of ourselves, because in the medical device industry, anything less than precise will not suffice. The ability to serve our customers in the most dynamic manner is our priority, and we look forward to keeping our history of change and success alive.

About ASG Medical Systems

ASG Medical Systems, founded in 1991 and headquartered in Florida, USA, is the world leader in catheter and guidewire manufacturing automation . ASG tubing and guidewire cutters, feeders, testers, and custom automation machines provide high production capacity and consistent outgoing quality while reducing manufacturing costs. For more information on how ASG can automate your medical device manufacturing processes, please visit www.asgmedical.com or call +1-561-848-6684.
