ASG Medical Systems, located in West Palm Beach, Florida, designs, develops, manufactures, and sells the finest precision automated equipment for catheter, guidewire, and tubing manufacturing. We delight our customers with equipment that improves their productivity, decreases their costs, improves their quality, improves their safety, and significantly provides them with a competitive edge in today's world marketplace.

Our primary products are precision automated tubing, catheter, and guidewire cutters, feeders, dereelers, testers, and assemblers. Much of our work is custom designed to meet the rigorous needs of our demanding customers; who include most of the major medical device manufacturers. We additionally provide precision tube cutting services. In short, we have the capability to move, precise, process, and automate tubing and guidewires better than anyone!

ASG Medical Systems began in 1991 and experienced phenomenal growth following a leveraged buy-out from Tyco in 2002. To keep pace with our growth and expansion, we recently moved to a much larger, nicer facility to meet our increasing customers' needs. *We continue to develop exciting leading-edge products, such as a single-operation cut-slit-flare machine and an automated coil assembler that greatly simplify our customers' manufacturing processes.* Our client site services include installation, training, maintenance, and on-going product support.

We look forward to working with and serving you!
