

Frequently Asked Questions

Technical Innovations/ASG Medical Systems merger and newly-created entity, Syneo

On July 13, 2011, *ASG Medical Systems of West Palm Beach, Florida*, the leader in catheter and guidewire manufacturing automation and *Technical Innovations of Angleton, Texas*, the leader in hole drilling and hole punching technology for catheters and cutting tools for tissue cutting and surgical device applications, merged to create Syneo. The existing management will remain at both companies, and both companies will operate from their current locations.

Why did Technical Innovations and ASG Medical Systems merge?

The ASG/TI partnership will yield greater innovation in catheter manufacturing technology and synergy in our product integrations. The combination of technologies allows broader solutions for medical device manufacturing in an automated environment. This leads to better results and increased productivity and efficiency for our customers, and that is our priority.

Will my current contact information with ASG or TI change?

ASG and TI will continue to operate at their current locations, and your primary contact person will stay the same. Telephone numbers, fax numbers and e-mail addresses will remain the same until further notified.

Has the purchasing procedure changed?

No, the purchasing procedure has not changed in any way. Technical Innovations and ASG Medical Systems are still legal entities that will continue to accept purchase orders under the Technical Innovations or ASG Medical Systems names.

Do you have a new Web site?

A new Web site is in development. Until then, www.asgmedical.com and www.technicalinnovations.com will be fully accessible and functional.

What does "Syneo" mean?

Great question! It represents *synergy* in product integration + *innovation* in technology. Our tag line is "the medical device solutions company".

About Technical Innovations

Technical Innovations designs and manufactures hole-making systems including machines and drills, punches and skivers for placing very precise holes in catheter-based medical devices. TI also designs and manufactures cutting tools for tissue cutting and surgical device applications. The company was founded in 1993 and is located in Angleton, Texas, USA which is located 45 miles south of Houston, Texas.
